AUOUR GLOBAL EQUITY STRATEGY

Transition *Report*

PROSPECT	STRATEGY	REPORT DATE
The Rhodes Living Trust – A. Crabbe	Auour Global Equity	June 24, 2026

01 Portfolio Impact Summary

NET REALIZED GAIN / LOSS

$52,494

Tax realization from proposed trades

UNREALIZED — CURRENT

$219,126

Unrealized amount before transition

GAIN RETENTION RATE

76.0%

Share of current unrealized gain deferred (100% − $52,494 ÷ $219,126)

Based on the portfolio analysis, the current allocation is heavily concentrated in U.S. growth-oriented equities, with particularly large exposures to technology, artificial intelligence, and semiconductor-related investments. Technology alone represents approximately **46% of the equity allocation**, while thematic exposures tied to artificial intelligence and semiconductors account for a significant portion of the portfolio's overall risk profile. The portfolio also exhibits a strong growth bias and relatively limited diversification across investment styles, sectors, and global markets.

Our recommendation is to transition the portfolio to the **Auour Global Equity Strategy**. While the strategy remains focused on long-term capital appreciation, it seeks to achieve that objective through broader diversification across regions, sectors, and investment factors. Rather than relying heavily on a narrow group of companies and themes to drive returns, the Global Equity Strategy is designed to participate in opportunities across a wider range of global markets and economic environments. This diversification can help reduce the portfolio's dependence on any single investment trend or market outcome.

> *The recommendation should not be viewed as a reduction in confidence regarding technology or artificial intelligence. Instead, it reflects a desire to manage risk prudently after a period in which a relatively small group of companies has generated exceptional returns and now trades at elevated valuations.*

The current portfolio's concentration in these areas increases the potential impact of any future disappointment in earnings growth, competitive positioning, or investor sentiment. By broadening exposures and reducing concentration risk, we believe the Global Equity Strategy offers a more balanced approach to pursuing long-term growth while improving the portfolio's resilience across a wider range of market conditions.

02 Target Model Portfolio

TARGET ALLOCATION

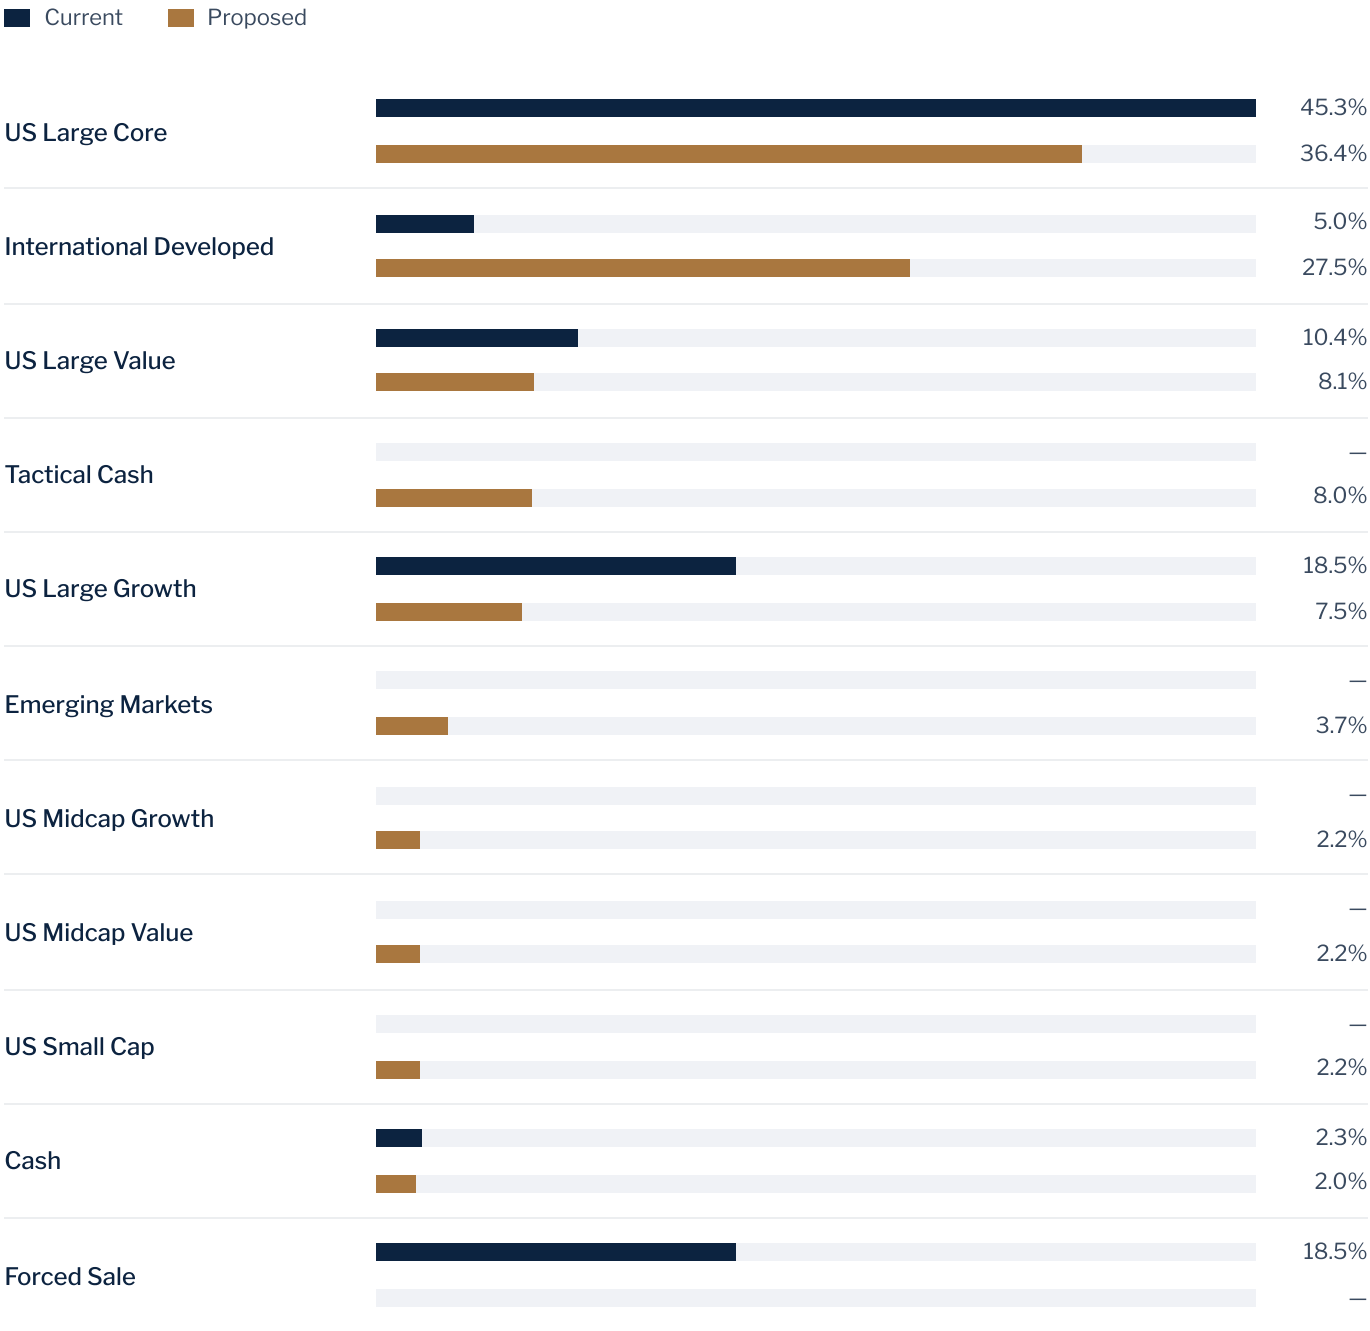

US Large Core 36.38% | International Developed 27.50% | US Large Value 8.12% | Tactical Cash 8.00%

US Large Growth 7.50% | Emerging Markets 3.75% | US Midcap Growth 2.25% | US Midcap Value 2.25%

US Small Cap 2.25% | Cash 2.00%

MODEL TICKER	ASSET CLASS	TARGET %	DRIFT %
SPYM	US Large Core	36.38%	±3.00%
SPDW	International Developed	27.50%	±3.00%

	Cash subtotal	**12,525**	—	**2.0%**

Totals are rounded to whole dollars; small rounding differences may occur.

04 Things to Note

Point-in-Time Estimate

Figures and calculations reflect a snapshot as of the date of this analysis. Anticipated gain realization is an estimate and subject to fluctuation based on market movement, execution timing, and pricing changes prior to trade date.

Risk Priority Over Tax Efficiency

A shift in market risk per our risk models may trigger a rebalance independent of this transition schedule, likely generating an additional taxable event. Principal protection supersedes tax minimization in all cases.

Prior Transactions Excluded

YTD transactions executed prior to this transition are not reflected in these calculations. Actual client tax liability may exceed the estimate shown.

Share Class Illustrative Only

Share classes displayed (e.g., A, C) are for illustrative purposes and do not reflect end-state holdings. Non-institutional share classes must be converted to institutional class prior to transition for advisory eligibility. Conversion is a non-taxable event.

Legacy Mutual Fund Distributions

Where legacy mutual funds are held in place of preferred ETFs, clients may incur additional taxable distributions (e.g., capital gains, dividend, or income distributions) generated by the fund itself. These distributions are outside our control, are not reflected in this transition's estimated tax impact, and may result in tax liability beyond what is shown here.

05 Trade Order Execution List

Sells

TICKER	AMOUNT ($)	REASONING
FEPAX	40,162	Liquidated Grade 2 asset
FCBAX	14,633	Liquidated Grade 2 asset
FSTAX	29,871	Liquidated Grade 2 asset
FACDX	31,173	Liquidated Grade 2 asset
CASH	2,060	Liquidated Grade 0 (Model) asset
FASDX	14,206	Liquidated Grade 1 equivalent
FNIAX	55,686	Liquidated Grade 2 asset
FFONX	68,947	Liquidated Grade 2 asset

Buys

TICKER	AMOUNT ($)	REASONING
VWO	23,479	Rebalance to Emerging Markets
SPDW	140,910	Rebalance to International Developed

ADDITIONAL DISCLOSURES

This analysis is provided for informational purposes only and does not constitute tax or legal advice. Advisors should direct clients to consult their own tax or legal counsel regarding their specific situation. Estimated tax impact is derived from cost basis and holding period data as provided by custodian(s); accuracy is not independently verified, and discrepancies in custodial data will affect output. Short-term/long-term classification reflects holding period as of the analysis date and is subject to change if the transition timeline shifts. This output does not include and should not be construed as investment performance or return data. This analysis is hypothetical and for planning purposes only; it does not constitute a recommendation or reflect an executed transaction.
