STRATEGY
50% Auour Global Balanced + 50% Auour Global Equity

REPORT DATE
June 29, 2026

01 Portfolio Impact Summary

NET REALIZED GAIN / LOSS	UNREALIZED — CURRENT	GAIN RETENTION RATE
$1,005	$12,320	91.8%
Tax realization from proposed trades	Unrealized amount before transition	Share of current unrealized gain deferred (100% − $1,005 ÷ $12,320)

The current portfolio is broadly diversified across domestic and international equities, fixed income, and cash. However, it is constructed using numerous actively managed mutual funds, several of which have overlapping investment mandates and similar investment objectives. The result is a portfolio that is more complex than necessary while maintaining a substantial cash allocation that may reduce long-term growth potential. Although the portfolio has historically exhibited a moderate level of risk, we believe its construction can be simplified and made more efficient without materially changing the overall investment experience.

Our recommendation is to transition the portfolio to a 50% allocation to the Auour Global Equity Strategy and a 50% allocation to the Auour Global Balanced Strategy. Based on the historical experience of these strategies since inception, we believe this combination provides a long-term risk profile that is comparable to the current portfolio while offering a more coordinated and disciplined investment approach. Rather than relying on numerous independent managers making separate investment decisions, both strategies are managed through the Auour Regime Model, a proprietary asset allocation process that continuously evaluates market conditions, valuations, credit markets, and global economic trends to position the portfolio for

changing investment environments.

Equally important, the transition will be implemented with careful attention to tax efficiency. Existing holdings will be evaluated individually, and where appropriate, retained or mapped into the new allocation in order to minimize unnecessary portfolio turnover and limit the realization of taxable capital gains. Our objective is not to replace investments simply for the sake of change, but rather to improve the overall portfolio structure while remaining mindful of the tax consequences of each investment decision.

We believe this approach results in a portfolio that is simpler to manage, globally diversified, and supported by a consistent, research-driven investment process. By combining complementary growth and balanced strategies within a single allocation framework, the portfolio is designed to maintain a level of risk that is consistent with the client's current investment experience while providing the flexibility to adapt as market conditions evolve.

04 Things to Note

Point-in-Time Estimate

Figures and calculations reflect a snapshot as of the date of this analysis. Anticipated gain realization is an estimate and subject to fluctuation based on market movement, execution timing, and pricing changes prior to trade date.

Risk Priority Over Tax Efficiency

A shift in market risk per our risk models may trigger a rebalance independent of this transition schedule, likely generating an additional taxable event. Principal protection supersedes tax minimization in all cases.

Prior Transactions Excluded

YTD transactions executed prior to this transition are not reflected in these calculations. Actual client tax liability may exceed the estimate shown.

Share Class Illustrative Only

Share classes displayed (e.g., A, C) are for illustrative purposes and do not reflect end-state holdings. Non-institutional share classes must be converted to institutional class prior to transition for advisory eligibility. Conversion is a non-taxable event.

Legacy Mutual Fund Distributions

Where legacy mutual funds are held in place of preferred ETFs, clients may incur additional taxable distributions (e.g., capital gains, dividend, or income distributions) generated by the fund itself. These distributions are outside our control, are not reflected in this transition's estimated tax impact, and may result in tax liability beyond what is shown here.

ADDITIONAL DISCLOSURES

This analysis is provided for informational purposes only and does not constitute tax or legal advice. Advisors should direct clients to consult their own tax or legal counsel regarding their specific situation. Estimated tax impact is derived from cost basis and holding period data as provided by custodian(s); accuracy is not independently verified, and discrepancies in custodial data will affect output. Short-term/long-term classification reflects holding period as of the analysis date and is subject to change if the transition timeline shifts. This output does not include and should not be construed as investment performance or return data. This analysis is hypothetical and for planning purposes only; it does not constitute a recommendation or reflect an executed transaction.
